Professional Summary:

Results-driven Software Developer with a B.Sc. in Information Technology. Experienced in building full-stack web and modern Android applications using Kotlin, Java, and React. Proven ability to implement secure backends using Firebase and Appwrite, with a strong focus on writing clean, efficient code and developing user-centric solutions.

Technical Skills:

- **Languages:** Kotlin, Java, JavaScript, TypeScript, Python, C++, C#, HTML/CSS, SQL
- **Frameworks & UI:** React, Angular, Jetpack Compose, Android SDK, Bootstrap
- **Back-end & APIs:** Node.js, RESTful APIs, Appwrite, Firebase, MongoDB
- **DevOps & Tools:** Git, GitHub Pages, Cloudinary, OBS, Machine Learning

Professional Experience & Projects:

Independent Software Developer | VerseView Broadcasting Bridge *February 2026 – Present*

- Engineered a real-time data bridge using Node.js to scrape live presentation data and push it seamlessly to a Firebase backend, achieving a data synchronization speed of 101.2ms.
- Developed an auto-scaling React frontend (deployed via GitHub Pages and supporting up to 100 concurrent remote devices) featuring a dynamic text-rendering algorithm that calculates container dimensions in real-time to adjust font sizes and completely prevent UI overflow.
- Integrated custom lower-thirds overlays optimized for live streaming software like OBS and Zoom for large-scale audience viewing.

Independent Android Developer & Web Developer | ChatZone *August 2025 – January 2026*

- Developed and deployed a fully responsive web version of the messaging platform (2,000+ lines of code) using React and Firebase, integrating Cloudinary for media management and hosting the application on GitHub Pages.
- Built a secure, real-time Android messaging application (architecting a 4,000+ line Java/XML codebase) with built-in parental controls, achieving a message synchronization speed of 320ms.
- Engineered an automated background monitoring system that restricts user access between 12 AM and 5 AM and alerts parents if usage exceeds 30 continuous minutes.

Independent Full-Stack Developer | NotesLib (Web & Android Ecosystem) | February 2025 - October 2026

- Engineered a cross-platform document management ecosystem for Android and Web, integrating an Appwrite backend to power secure user authentication, real-time database synchronization, and scalable PDF bucket storage.
- Developed the scalable Android client structuring 3,700+ lines of Kotlin and Jetpack Compose, optimizing architecture to achieve a highly responsive cold-start load time of 959.8ms.
- Built a responsive Angular web application featuring a custom CSS design system, a 5-level hierarchical organization structure, and an automated multi-step modal for rapidly generating bulk study materials without manual entry.
- Implemented smart search utilizing Appwrite Key/Fulltext indexing alongside a real-time notification system, allowing users to securely request, manage, and grant access to private academic documents.

Education & Certifications:

- **Bachelor of Science in Information Technology (B.Sc. IT)** | Nirmala Memorial Foundation College, Kandivali East | May 2025 | CGPI: 8.40
- **Full-Stack Development (React, Angular, Node.js, MongoDB)** | Udemy | 2026
- **Machine Learning Certification** | IIT Kharagpur | 2022
